Length portioning machine for high-speed sausage linking

The Vemag LPG208 High-Speed Length Portioning Machine features two rotating linking horns to significantly reduce casing change times and increase production. The automatic two-horn system eliminates the downtime found in the start-and-stop casing loading process of single-horn machines. As the casing on the first horn is stuffed and linked, the user simultaneously loads another casing onto the second horn. The LPG208 produces sausages that are identical in length and weight. It produces fresh or cooked sausage in natural, collagen or cellulose casings. It can be easily attached to the Vemag TM203 Link Cutter or Vemag AH204 Automatic Hanging Machine for the highest levels of production. The LPG208 can produce sausages ranging in diameter from 13 to 40 millimeters. The linking speed can be adjusted to suit the type of casing.

Super Sponsorship: Sourcing E-ssentials

Published two to three times monthly on the second, fourth and if applicable, fifth Wednesday. Your company is identified as the sponsor with your four color product photo and product release featured prominently in either Meatingplace or POULTRY, in the Sourcing Essentials e-newsletter and online at Meatingplace.com. The Super Sponsorship is ideal for producing hard leads, driving traffic to your Web site and branding.
